In 3 Steps to a Secure LOTO System According to MSL 1.1 Standard:

What is LOTO?

LOTO is the abbreviation of Lockout Tagout, in English „lock and tag“.

Lockout Tagout stands for the secure locking and Taging of energy sources during the maintenance and repair of machines and equipment. It was developed in the US, where the number of accidents at work has already been reduced by over 70% thanks to LOTO. Lockout Tagout is becoming increasingly popular in Europe too.

What is the MSL 1.1 Standard?

The MSL 1.1 standard was developed by MAX Systems to simplify the introduction of a secure lockout tagout system. According to our standard, the start in a LOTO system can already be made with three locks. The use of different closing locks avoids accidents resolving from the incorrect removal of locks, since it is not possible to switch on the system until every employee has removed their lock. The clear labelling of systems and energy points according to MSL 1.1 is the cornerstone of a successful and secure LOTO concept. It ensures understanding and avoids errors during use. A successful implementation of the concept requires training of all concerned employees. Due to the simple system, this can be done in a maximum of 30 minutes.

PADLOCKS MASTER LOCK

INFO:

As standard we offer all locks with the locking system "Various locking".

Upon request, we can also provide them with the "Keyed alike" and "Different keyed with master key" or a grand master key locking systems.

Locking systems explained simply:

Various locking (Different keyed): Each lock can only be opened by a unique key that does not fit any other lock in the series.

Keyed alike: Each padlock has a key, and all keys are the same, opening any lock in the group.

Different keyed with master key: Each lock has a unique key, and the master key can open all locks in the system.

Aluminium MasterLock Locks:

The MasterLock Lock series S1100 & A1100 have an anodized aluminum housing and are resistant to chemicals and extreme temperatures. Due to their corrosion-resistant surface, they are ideally suited for use in harsh environments. Due to the long-lasting bright colour of the locks, they are also easily visible and provide a high level of security.

MULTIPLE LOCKING BRACKETS

Multiple locking brackets are an effective component of multi-person locking. By installing a bracket, several employees can lock a system with their padlock at the same time. The system can only be switched on again when the last employee has removed his lock from the lock bar.

IDEAL FOR MACHINES WITH ONLY ONE ENERGY POINT.

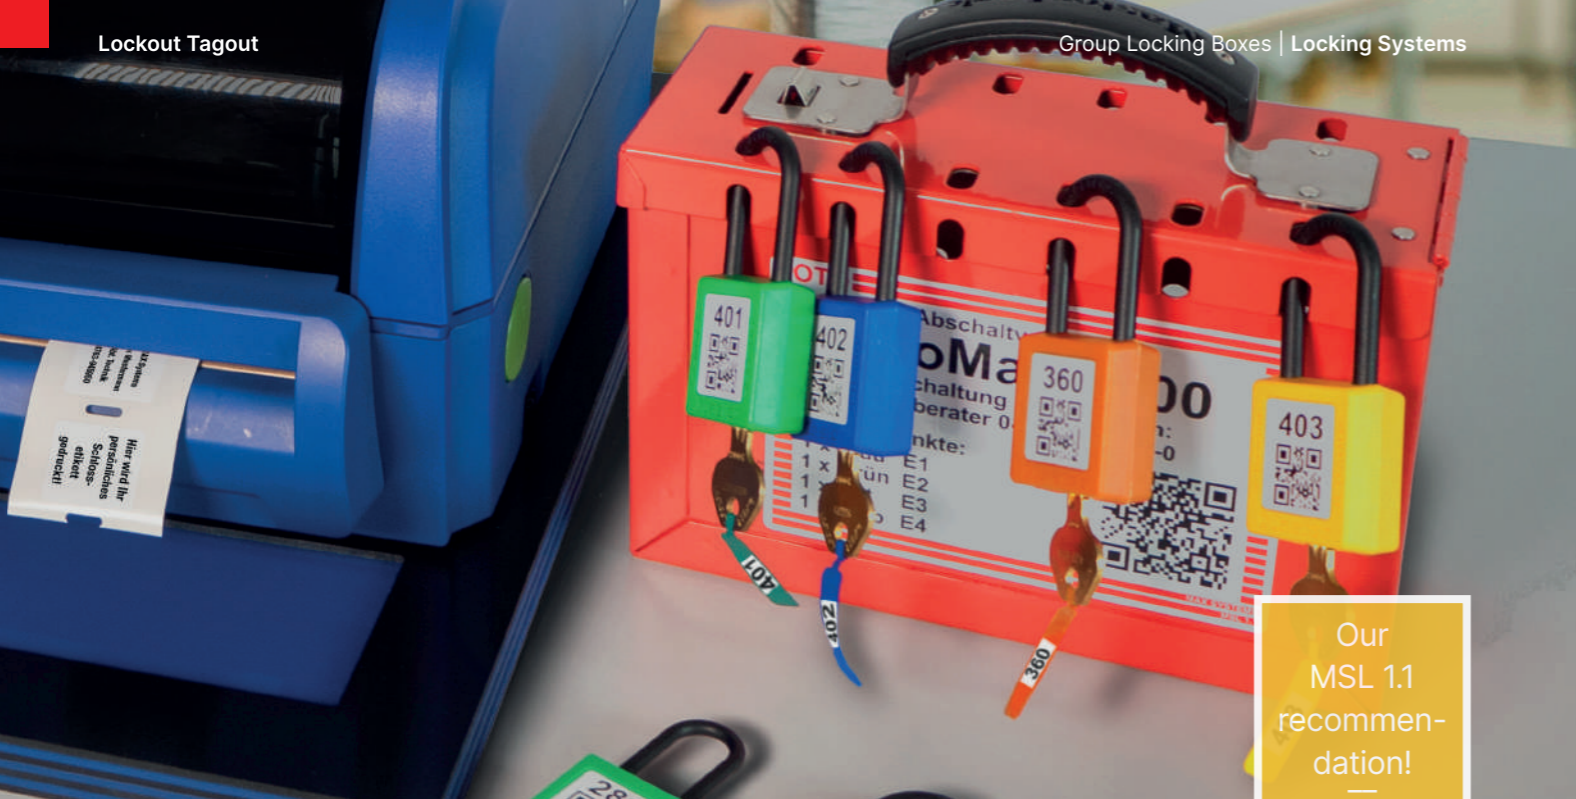

For machines with only one energy point, a multiple locking bracket is the ideal locking option according to MSL 1.1!

GROUP LOCKING BOXES

Our group locking boxes are the perfect solution for a LOTO system according to MSL 1.1 standard. When using the boxes according to MSL 1.1 standard, the keys of the red locks are stored in the group locking boxes. The box is in turn locked with the green signal lock and each employee can attach his or her individual lock to the box. The keys in the box can only be accessed once the last employee has removed his padlock from the box.

IDEAL FOR MACHINES WITH MORE THAN ONE ENERGY POINT.

For machines with more than one energy point, group locking is the ideal locking option according to MSL 1.1!

VALVE LOCKING

Valve locks are installed on the valves of the systems during maintenance and repair work. The valve lock encloses the valve handle so that it cannot be operated by other persons. It is ensured that all employees can carry out the work on the plant without complications.

We have screw valve locks, pressure gas valve locks, flap valve locks and ball valve locks in our assortment.

THE RIGHT LOCKING SYSTEM FOR EVERY VALVE.

END FLANGE LOCKING

The closing flange lock completely covers the flange bolts. This prevents access to the aperture until all work on the line has been completed.

The adjustable parts of the locking system allow a secure fit and cover the nuts with which the panels are attached. An exact fit is ensured by the adjustable parts of the locking system and can therefore be used for several flange connections.

NOTE:
Flange and valve covers protect employees from the release of hazardous liquids and gases. Available upon request from us as well.

ELECTRICAL LOCKING

The risk of dangerous accidents involving electrical installations is high. To avoid this, we offer a wide range of locks that make the power supply inaccessible during maintenance and repair work. This allows the work to be carried out in peace and without disturbances. The locks block electrical shutdown points, wall switches, plug connections and other devices.

We have special padlocks for circuit breakers, circuit breaker locking for large and standard switches, D-safety locks for screw locks, mini circuit breaker locks and locking for electrical connectors in our assortment.
